Heart Bypass Surgery (CABG) in India: A Trusted Destination for Advanced Cardiac Care

Heart disease is one of the leading causes of death worldwide, affecting millions of people every year. When the arteries that supply blood to the heart become severely blocked, medication or angioplasty may no longer be enough. In such cases, **Coronary Artery Bypass Grafting (CABG)**, commonly known as heart bypass surgery, can restore healthy blood flow and significantly improve a patient's quality of life.

India has emerged as one of the most preferred destinations for heart bypass surgery, attracting patients from Africa, the Middle East, South Asia, and many other regions. The combination of experienced cardiac surgeons, advanced hospitals, and affordable treatment makes India a reliable choice for international patients.

What Is Heart Bypass Surgery?
Heart bypass surgery creates a new pathway for blood to reach the heart muscle by using a healthy blood vessel to bypass a blocked coronary artery.

Who May Need CABG Surgery?
• Severe coronary artery blockage
• Chest pain (angina)
• Multiple blocked arteries unsuitable for angioplasty
• Reduced heart function
• High risk of heart attack

A cardiologist evaluates the condition using ECG, echocardiography, angiography, and blood tests.

Why Choose India?
Affordable treatment, experienced cardiac surgeons, advanced hospitals, accredited facilities, modern diagnostics, personalized care, and international patient support.

Recovery After CABG
Recovery includes ICU monitoring, gradual activity, medications, cardiac rehabilitation, and regular follow-up for long-term heart health.

How EdhaCare Supports International Patients
EdhaCare assists with hospital selection, medical visas, airport pickup, accommodation, interpreters, and follow-up care.
